. . . cousin, Mavis, is growing up, and that she's turning into a monster. At the same time, the evil Lardner family is in town to celebrate their 100th . . . birthday. When Dracula is framed for child-murder and discovers that his son has turned into a jerk, it's up to him to save his son, his daughter, and his one true love, Mavis. Hair will be released on May 8th. Join the Monster Mash and watch their Facebook page for more fun! I was completely in love with this film. This is one of the funniest movies of the year and it was great to see the evolution of Universal in the 90s. The cast was great and the story was so funny. The only disappointment I had was that it was a prequel of sorts and there was no mention of the grandparents or any of the original cast.

It was a little disappointing because I would have liked to see some nostalgia for a change. The relationship between hemodialysis dose and dialytic complications in the dialysis population: a systematic review and meta-analysis. The current recommended guidelines for maintenance hemodialysis (HD) dose (Kt/V) may not be appropriate for all dialysis patients, and there is wide variation in Kt/V of individual dialysis providers. The systematic review and meta-analysis of observational studies was performed to identify the relationships between dialysis dose and dialytic complications. The MEDLINE, Cochrane

---

Library, and EMBASE databases were searched from January 1990 to May 2013 for observational studies assessing the relationships between Kt/V and dialytic complications. Studies were included if the patients were on maintenance HD, if the dialytic dose was measured and assessed on a prospective basis, and if the outcomes were at least one dialytic complication or mortality. Of 1115 articles identified, nine studies met the inclusion criteria. All studies showed an association between Kt/V and dialytic complications. Four studies demonstrated a statistically significant relationship between Kt/V and both mortality and mortality or dialytic complications. Two studies demonstrated a statistically significant relationship between Kt/V and a dialytic complication but not mortality. Two studies showed a statistically significant relationship between Kt/V and mortality but not dialytic complications. This systematic review showed a relationship between dialysis dose and dialytic complications
